

Distribution Reliability Optimization Assessment

Distribution Companies are increasingly required to improve and maintain reliability while adhering to various rate freezes, budget, and Regulation requirements. The opX Team's Assessment approach will provide assistance to these Companies in the evaluation of their reliability programs, to more effectively target improvements.

opX's comprehensive Reliability Optimization Assessment will guide your Distribution company in transitioning from a 'reactive' approach to a 'planned' approach. All aspects of distribution reliability will be addressed from equipment procurement to installation and maintenance, to forensic analysis after failure.

Benefits

- Improved Reliability Program Work Culture
- Improved Reliability Metrics
- Improved Customer Satisfaction
- Improved Return on Investment (ROI)
- Reduced Faults from Deficient Field Construction
- Improved Line-Crew and Public Safety

The concepts of an effective distribution reliability program will be presented to members of your systems engineering, operations, and management staffs by reviewing: 1. the current reliability program and its interfacing with other programs and processes; 2. the existing technologies; 3. the design and construction procedures; 4. the outage management system; and, 5. the management and work culture of the company. The assessment of these 5 areas is necessary to determine whether the components that are already in place, and those needing improvement, for effective reliability are identified.

All areas, from the ground level (protection or tree-maintenance) to the management level, will be covered to enable your company to evaluate all the distribution-related programs.

An increased awareness of the issues of reliability will allow the staff members, management through the field crews, to be knowledgeable in the strategies that are effective and actionable for reliability improvement.

Additional Information – for your evaluation of our effective Distribution Reliability Optimization Assessment more details can be provided on request. In addition, opX engineers are willing to visit your facility to present and discuss further aspects of the Program. Please contact us at our website, or you can call/fax us directly.
