op X Consulting Working with Center Point Energy (CNP) Substation PDM/PM Valuation Project

op X Consulting has been working with CNP to Develop PdM/PM Cost Benefit Analysis and Task Valuation/Risk Management Processes. As part of this project the team developed a Cost Benefit Analysis Process as well as a database tool to organize and present the results. The PdM/PM valuation portion of the project included Prioritizing each asset as it related to its maintenance requirements and developing a process to determine the consequences (Risk) mitigated by performance of each maintenance task. This process now enables CNP to make risk informed maintenance decisions.
