

T&D Maintenance Optimization Program

Maintenance Optimization is the process of integrating the utility's current maintenance procedures, processes, and technologies into a comprehensive Maintenance Program.

opX's staff evaluates the Maintenance Basis and the Work Process currently being used, and then focuses on both the programmatic and technical aspects in order to integrate and improve the current maintenance practices.

This comprehensive T&D Maintenance Optimization program discloses whether your utility: 1) has a state-of-the-art T&D maintenance program; 2) identifies and accomplishes maintenance tasks effectively; and, 3) learns from experiences to continually improve its maintenance practices.

The objective of opX's T&D Maintenance Optimization Program is to improve equipment availability and reliability by developing and implementing appropriate and sustainable inspection and maintenance strategies, and integrating the necessary cross-functional support and participation by all staffing groups.

Benefits

- Streamlined Maintenance Practices
- Reduced Equipment Repair and Replacement Costs
- Avoided Equipment Failures
- Avoided System Outages
- Improved System Reliability
- Improved Manpower Utilization
- Improved Productivity

Our T&D Maintenance Optimization Program serves both the Nuclear and Fossil Generation Utilities. The Program consists of: Conducting a Maintenance Assessment ♦ Benchmarking-Strategic and Long Range Planning ♦ Establishing Key Metrics ♦ Prioritizing Resources ♦ Developing and Implementing a Maintenance Plan.
